LEGAL NOTICE

The copyright in this Specification is owned by the Car Connectivity Consortium LLC ("CCC LLC"). Use of this Specification and any related intellectual property (collectively, the "Specification"), is governed by these license terms and the CCC LLC Limited Liability Company Agreement (the "Agreement").

Use of the Specification by anyone who is not a member of CCC LLC (each such person or party, a "Member") is prohibited. The legal rights and obligations of each Member are governed by the Agreement and their applicable Membership Agreement, including without limitation those contained in Article 10 of the LLC Agreement.

CCC LLC hereby grants each Member a right to use and to make verbatim copies of the Specification for the purposes of implementing the technologies specified in the Specification to their products ("Implementing Products") under the terms of the Agreement (the "Purpose"). Members are not permitted to make available or distribute this Specification or any copies thereof to non-Members other than to their Affiliates (as defined in the Agreement) and subcontractors but only to the extent that such Affiliates and subcontractors have a need to know for carrying out the Purpose and provided that such Affiliates and subcontractors accept confidentiality obligations similar to those contained in the Agreement. Each Member shall be responsible for the observance and proper performance by such of its Affiliates and subcontractors of the terms and conditions of this Legal Notice and the Agreement. No other license, express or implied, by estoppel or otherwise, to any intellectual property rights are granted herein.

Any use of the Specification not in compliance with the terms of this Legal Notice, the Agreement and Membership Agreement is prohibited and any such prohibited use may result in termination of the applicable Membership Agreement and other liability permitted by the applicable Agreement or by applicable law to CCC LLC or any of its members for patent, copyright and/or trademark infringement.

THE SPECIFICATION IS PROVIDED "AS IS" WITH NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION ANY WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS, AND COMPLIANCE WITH APPLICABLE LAWS.

Each Member hereby acknowledges that its Implementing Products may be subject to various regulatory controls under the laws and regulations of various jurisdictions worldwide. Such laws and regulatory controls may govern, among other things, the combination, operation, use, implementation and distribution of Implementing Products. Examples of such laws and regulatory controls include, but are not limited to, road safety regulations, telecommunications regulations, technology transfer controls and health and safety regulations. Each Member is solely responsible for the compliance by their Implementing Products with any such laws and regulations and for obtaining any and all required authorizations, permits, or licenses for their Implementing Products related to such regulations within the applicable jurisdictions.

Each Member acknowledges that nothing in the Specification provides any information or assistance in connection with securing such compliance, authorizations or licenses.

NOTHING IN THE SPECIFICATION CREATES ANY WARRANTIES, EITHER EXPRESS OR IMPLIED, REGARDING SUCH LAWS OR REGULATIONS. ALL LIABILITY, INCLUDING LIABILITY FOR INFRINGEMENT OF ANY INTELLECTUAL PROPERTY RIGHTS OR FOR NONCOMPLIANCE WITH LAWS, RELATING TO USE OF THE SPECIFICATION IS EXPRESSLY DISCLAIMED. BY USE OF THE SPECIFICATION, EACH MEMBER EXPRESSLY WAIVES ANY CLAIM AGAINST CCC LLC AND ITS MEMBERS RELATED TO USE OF THE SPECIFICATION.

CCC LLC reserve the right to adopt any changes or alterations to the Specification as it deems necessary or appropriate.

1 TERMS AND ABBREVIATIONS

2 A2DP Bluetooth Advanced Audio Distribution Profile

3 RTP Real Time Protocol

4 VNC Virtual Networking Computing

5 UPnP Universal Plug and Play

7 MirrorLink is a trademark of the Car Connectivity Consortium LLC.

8 Bluetooth is a registered trademark of Bluetooth SIG Inc.

9 RFB and VNC are registered trademarks of RealVNC Ltd.

10 UPnP is a registered trademark of UPnP Forum.

11 Other names or abbreviations used in this document may be trademarks of their respective owners.

1 ABOUT

This document specifies all MirrorLink protocol conformance test cases for the Audio Specification [2].

The specification lists a series of requirements, either explicitly or within the text, which are mandatory elements for a compliant solutions. Recommendations are given, to ensure optimal usage and to provide suitable performance. All recommendations are optional.

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are following the notation as described in RFC 2119[1].

1. MUST: This word, or the terms "REQUIRED" or "SHALL", mean that the definition is an absolute requirement of the specification.
2. MUST NOT: This phrase, or the phrase "SHALL NOT", mean that the definition is an absolute prohibition of the specification.
3. SHOULD: This word, or the adjective "RECOMMENDED", mean that there may exist valid reasons in particular circumstances to ignore a particular item, but the full implications must be understood and carefully weighed before choosing a different course.
4. SHOULD NOT: This phrase, or the phrase "NOT RECOMMENDED" mean that there may exist valid reasons in particular circumstances when the particular behavior is acceptable or even useful, but the full implications should be understood and the case carefully weighed before implementing any behavior described with this label.
5. MAY: This word, or the adjective "OPTIONAL", means that an item is truly optional. One vendor may choose to include the item because a particular marketplace requires it or because the vendor feels that it enhances the product while another vendor may omit the same item. An implementation which does not include a particular option MUST be prepared to interoperate with another implementation which does include the option, though perhaps with reduced functionality. In the same vein an implementation which does include a particular option MUST be prepared to interoperate with another implementation which does not include the option (except, of course, for the feature the option provides.)

2 DEFINITIONS

2.1 Execution of Test Cases

Every test case is uniquely identified by an identifier.

- A MirrorLink server **MUST** pass all test cases, starting with SR.
- A MirrorLink client **MUST** pass all test cases, starting with CL

Every test case description includes an entry, whether the test cases is considered mandatory or not.

- Test cases marked as **MANDATORY**, **MUST** be executed.
- Test cases marked as **CONDITIONAL**, **MUST** be executed if the given condition is met.
- Test cases marked as **CONDITIONAL**, **MUST NOT** be executed if the given condition is not met.
- Test cases marked as **NONE**, **MUST NOT** be executed

2.2 Server Definitions

The following definitions are frequently used in different server and client test cases. Usage is indicated by the given designator name.

2.2.1 RTP Server Connect

This definition contains all necessary steps to launch the RTP server on the MirrorLink server.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	Set Payload Type	Invoke Set Client Profile <ul style="list-style-type: none">• Define support for selected payload types	<ul style="list-style-type: none">• Client profile indicating support for selected payload types has been registered
3	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none">• Receive valid Application Listing• Includes RTP server(s) for selected payload types and audio types
4	Launch RTP Server	Invoke Launch Application for RTP server for selected payload type and audio type.	<ul style="list-style-type: none">• Receive URL on Launch Application
5	Connect to RTP server	Open UDP socket Send single UDP bytes to RTP server until at least one RTP packet arrives	<ul style="list-style-type: none">• First RTP packet arrives• Packets received from URL identical to the advertised one

Table 1: RTP Server Connect - Definitions

2.2.2 RTP Server Disconnect

This definition contains all necessary steps to terminate the RTP server on the MirrorLink server.

Step	Name	Description	Expected Result
1	Terminate RTP Server	Invoke Terminate Application action for RTP Server Close UDP socket	<ul style="list-style-type: none">• RTP server terminated• No Audio packets received
2	UPnP Server Disconnect	See Definitions in [3]	

Table 2: RTP Server Disconnect - Definitions

2.2.3 RTP Client Connect

This definition contains all necessary steps to launch the RTP client on the MirrorLink server.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	Set Payload Type	Invoke Set Client Profile <ul style="list-style-type: none"> Define support for selected payload types 	<ul style="list-style-type: none"> Client profile indicating support for selected payload types has been registered
3	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP client(s) for selected payload types and audio types.
4	Launch RTP Client	Invoke Launch Application for RTP client, supporting selected payload type and audio type.	<ul style="list-style-type: none"> Receive URL on Launch Application
5	Connect to RTP client	Open UDP socket Send empty RTP packet	

Table 3: RTP Client Connect - Definitions

2.2.4 RTP Client Disconnect

This definition contains all necessary steps to terminate the RTP server on the MirrorLink server.

Step	Name	Description	Expected Result
1	Terminate RTP Client	Invoke Terminate Application action for RTP Client Close UDP socket	<ul style="list-style-type: none"> RTP client terminated No audio playback
2	UPnP Server Disconnect	See Definitions in [3]	

Table 4: RTP Client Disconnect - Definitions

2.3 Client Definitions

2.3.1 RTP Client Connect

This definition contains all necessary steps to connect to RTP client on the MirrorLink client.

Step	Name	Description	Expected Result
1	UPnP Client Connect	See Definitions in [3]	
2	UPnP Application Listing	Wait for Get Application List action. Provide Application List including RTP server with selected payload type(s) and audio type(s). Do not include BT modules into the App listing;	<ul style="list-style-type: none"> Invoke Get Application List action
3	Launch RTP Server	Wait for Launch Application action for the RTP server with selected payload type and audio type. If the RTP client is not launched automatically, the test engineer will start an application providing audio (PIXIT)	<ul style="list-style-type: none"> Invoke Launch Application AppID is matching RTP server RTP server provides selected payload type(s) and audio type(s)
4	Connect to RTP client	Open UDP socket Send empty RTP packet on single UDP byte	<ul style="list-style-type: none"> Receive single UDP bytes, until at least one RTP packet is send.

Table 5: RTP Client Connect - Definitions

2.3.2 RTP Client Disconnect

This definition contains all necessary steps to disconnect from the RTP client on the MirrorLink client.

Step	Name	Description	Expected Result
1	Terminate RTP Server	Terminate RTP Server	<ul style="list-style-type: none"> No audio playback
2	UPnP Client Disconnect	See Definitions in [3]	

Table 6: RTP Client Disconnect - Definitions

2.3.3 RTP Server Connect

This definition contains all necessary steps to connect to RTP Server on the MirrorLink client.

Step	Name	Description	Expected Result
1	UPnP Client Connect	See Definitions in [3]	
2	UPnP Client Profile	Set supported RTP payload types.	<ul style="list-style-type: none"> Invoke Set Client Profile action with the list of supported RTP payload types. Note: DUT may skip this step, in case it supports only RTP payload type 99.

Step	Name	Description	Expected Result
3	UPnP Application Listing	Wait for Get Application List action. Provide Application List including RTP client with selected payload type(s) and audio type(s).	<ul style="list-style-type: none"> Invoke Get Application List action
4	Launch RTP Client	Wait for Launch Application action for the RTP client with selected payload type and audio type.	<ul style="list-style-type: none"> Invoke Launch Application AppID is matching RTP client RTP client provides selected payload type(s) and audio type(s).
5	Connect to RTP client	Open UDP socket Prepare for RTP	<ul style="list-style-type: none">

Table 7: RTP Server Connect - Definitions

2.3.4 RTP Server Disconnect

This definition contains all necessary steps to disconnect from the RTP Server on the MirrorLink client.

Step	Name	Description	Expected Result
1	Terminate RTP Client	Terminate RTP Client	<ul style="list-style-type: none"> No Audio packets received
2	UPnP Client Disconnect	See Definitions in [3]	

Table 8: RTP Server Disconnect - Definitions

3 SERVER FEATURE TEST CASES

3.1 Audio Link Identification

3.1.1 SR/AUDIO/LINK/IdentifyRtpClientPt0

Requirement: CONDITIONAL

Condition: Support for RTP Client AND

Support for RTP payload type 0

The server's application list is searched for a RTP client announcing the payload type 0 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP clients with payload type 0 RTP client with content category Voice Command In listed first (if available) RTP clients with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 9: RTP client of payload type 0 is available – Test Steps

3.1.2 SR/AUDIO/LINK/IdentifyRtpClientPt98

Requirement: CONDITIONAL

Condition: Support for RTP Client AND

Support for RTP payload type 98

The server's application list is searched for a RTP client announcing the payload type 98 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP clients with payload type 98 RTP client with content category Voice Command In listed first (if available) RTP clients with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 10: RTP client of payload type 98 is available – Test Steps

3.1.3 SR/AUDIO/LINK/IdentifyRtpClientPt99

Requirement: CONDITIONAL

Condition: Support for RTP Client

The server's application list is searched for a RTP client announcing the payload type 99 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP clients with payload type 99 RTP client with content category Voice Command In listed first (if available) RTP clients with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 11: RTP client of payload type 99 is available – Test Steps

3.1.4 SR/AUDIO/LINK/IdentifyRtpServerPt0

Requirement: CONDITIONAL

Condition: Support for RTP payload type 0

The server's application list is searched for a RTP server announcing the payload type 0 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP servers with payload type 0 RTP server with content category Media Audio Out listed first (if available) RTP servers with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 12: RTP server of payload type 0 is available – Test Steps

3.1.5 SR/AUDIO/LINK/IdentifyRtpServerPt98

Requirement: CONDITIONAL

Condition: Support for RTP payload type 98

The server's application list is searched for a RTP server announcing the payload type 98 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	

Step	Name	Description	Expected Result
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP servers with payload type 98 RTP server with content category Media Audio Out listed first (if available) RTP servers with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 13: RTP server of payload type 98 is available – Test Steps

3.1.6 SR/AUDIO/LINK/IdentifyRtpServerPt99

Requirement: MANDATORY

Condition: None

The server's application list is searched for a RTP server announcing the payload type 99 in its format element.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP servers with payload type 99 RTP server with content category Media Audio Out listed first (if available) RTP servers with all possible content category combinations advertised, individually (PIXIT)
3	UPnP Server Disconnect	See Definitions in [3]	

Table 14: RTP server of payload type 99 is available – Test Steps

3.1.7 SR/AUDIO/LINK/IdentifyBtHFP

Requirement: CONDITIONAL

Condition: Server supports BT HFP

Test if a BT HFP application is available in the application listing.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing XML Includes BT HFP application
3	UPnP Server Disconnect	See Definitions in [3]	

Table 15: Identify BT HFP – Test Steps

3.1.8 SR/AUDIO/LINK/IdentifyBtA2DP

Requirement: CONDITIONAL

Condition: Server support BT A2DP

Test if a BT A2DP application is available in the application listing.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none">• Receive valid Application Listing XML• Includes BT A2DP application
3	UPnP Server Disconnect	See Definitions in [3]	

Table 16: Identify BT A2DP – Test Steps

3.2 Bluetooth

3.2.1 SR/AUDIO/BT/LaunchHFP

Requirement: CONDITIONAL

Condition: Support for BT HFP AND

Support for BT connection setup through MirrorLink

Test if BT HFP can be launched on the MirrorLink server. If the BT HFP Server is announced via UPNP it is started via the LaunchApplication() SOAP action. The test passes if BT HFP is started and the application status is foreground.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes BT HFP application
3	UPnP Action SetClientProfile	Set the client profile via the UPnP service that specifies BT address of the test system. Set startConnection to "false" and "true" in two separate test runs.	<ul style="list-style-type: none"> Received SetClientProfile response
4	Launch BT HFP	Invoke Launch Application for BT HFP Initiate BT connection (if required to do so) Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application Server initiates the BT connection (if required to do so). BT HFP status is "Foreground" Audio working
5	Terminate BT HFP	Invoke Terminate Application action for BT HFP.	<ul style="list-style-type: none"> BT HFP application terminated
6	UPnP Server Disconnect	See Definitions in [3]	.

Table 17: Launch BT HFP and check audio link - Test Steps

3.2.2 SR/AUDIO/BT/LaunchA2DP

Requirement: CONDITIONAL

Condition: Server supports BT A2DP AND

Support for BT connection setup through MirrorLink

Test if BT A2DP can be launched on the MirrorLink server. If the BT A2DP Server is announced via UPNP it is started via the LaunchApplication() SOAP action. The test passes if BT A2DP is started and the application status is foreground.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes BT A2DP application
3	UPnP Action SetClientProfile	Set the client profile via the UPnP service that specifies	<ul style="list-style-type: none"> Received SetClientProfile response

Step	Name	Description	Expected Result
		BT address of the test system. Set <code>startConnection</code> to "false" and "true" in two separate test runs.	
4	Launch BT A2DP	Invoke Launch Application for BT A2DP Initiate BT connection (if required to do so) Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application Server initiates the BT connection (if required to do so). BT A2DP status is "Foreground" Audio working
5	Terminate BT HFP	Invoke Terminate Application action for BT A2DP.	<ul style="list-style-type: none"> BT A2DP application terminated
6	UPnP Server Disconnect	See Definitions in [3]	.

Table 18: Launch BT A2DP and check audio link - Test Steps

3.2.3 SR/AUDIO/BT/TerminateHFP

Requirement: CONDITIONAL

Condition: Support for BT HFP AND

Support for BT connection setup through MirrorLink

Test if BT HFP can be terminated on the MirrorLink server.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes BT HFP application
3	UPnP Action SetClientProfile	Set the client profile via the UPnP service that specifies BT address of the test system. Set <code>startConnection</code> to "false".	<ul style="list-style-type: none"> Received SetClientProfile response
4	Launch BT HFP	Invoke Launch Application for BT HFP Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application Server initiates the BT connection. BT HFP status is "Foreground" Audio working
5	Terminate BT HFP	Invoke Terminate Application action for BT HFP. Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> BT HFP application terminated BT HFP status is "Notrunning" DUT MAY disconnect the BT connection
6	UPnP Server Disconnect	See Definitions in [3]	.

Table 19: Terminate BT HFP - Test Steps

3.2.4 SR/AUDIO/BT/TerminateA2DP

Requirement: CONDITIONAL

Condition: Server supports BT A2DP AND

Support for BT connection setup through MirrorLink

Test if BT A2DP can be terminated on the MirrorLink server.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes BT A2DP application
3	UPnP Action SetClientProfile	Set the client profile via the UPnP service that specifies BT address of the test system. Set startConnection to "false".	<ul style="list-style-type: none"> Received SetClientProfile response
4	Launch BT A2DP	Invoke Launch Application for BT A2DP Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application Server initiates the BT connection. BT A2DP status is "Foreground" Audio working
5	Terminate BT HFP	Invoke Terminate Application action for BT A2DP. Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> BT A2DP application terminated BT A2DP status is "Notrunning" DUT MAY disconnect the BT connection
6	UPnP Server Disconnect	See Definitions in [3]	.

Table 20: Terminate BT A2DP - Test Steps

3.3 RTP Client

3.3.1 SR/AUDIO/RTPC/LaunchRtpClient

Requirement: CONDITIONAL

Condition: Support for RTP Client

Tests if the RTP Client can be launched

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP client for payload type 99
3	Launch RTP Client	Invoke Launch Application for RTP client, supporting payload type 99. Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application RTP client status is "Foreground"
4	RTP Client disconnect	See definitions	<ul style="list-style-type: none"> RTP client terminated

Table 21: Launch RTP Client - Test Steps

3.3.2 SR/AUDIO/RTPC/ConnectRtpClient

Requirement: CONDITIONAL

Condition: Support for RTP Client

Tests if the RTP Server can connect to the RTP Client.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP client for payload types 99
3	Launch RTP Client	Invoke Launch Application for RTP client, supporting payload type 99.	<ul style="list-style-type: none"> Receive URL on Launch Application
4	Connect to RTP client	Open UDP socket Send empty RTP packet Send RTP packet stream	<ul style="list-style-type: none"> Validate receiving of audio stream (if possible).
5	RTP Client disconnect	See definitions	

Table 22: Connect RTP Client - Test Steps

3.3.3 SR/AUDIO/RTPC/TerminateRtpClient

Requirement: CONDITIONAL

Condition: Support for RTP Client

1 Tests if the RTP Client can be terminated

Step	Name	Description	Expected Result
1	RTP Client Connect	See Definitions Select payload type 99	
2	Terminate RTP Client	Invoke Terminate Application action. Close UDP socket Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> • RTP Client terminated • RTP Client status is "Notrunning" • No audio playback after termination
3	UPnP Client Disconnect	See Definitions in [3]	

2 Table 23: Terminate RTP Client - Test Steps

3 **3.3.4 SR/AUDIO/RTPC/InitialPlaybackLatency**

4 Requirement: CONDITIONAL

5 Condition: Support for RTP Client

6 The test engineer gets asked to prepare to listen to audio. The server sends a couple of RTP packets to the
7 client, together containing less than IPL samples as payload. The marker bit in the last packet is not set. The
8 client is expected to wait for at least IPL samples to start playback, thus the test engineer SHOULD NOT
9 hear anything. The test engineer is being asked if this is the case.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 98	
2	Send RTP packets	Send RTP packets to the MirrorLink Server's RTP client. Marker bit is not set. RTP stream, number of samples in RTP stream is less than 90% of announced IPL. Payload type 99	<ul style="list-style-type: none"> • RTP packets received • No audio playback
3	RTP client disconnect	See Definitions	

10 Table 24: Send payload type 98 RTP packets – Test Steps

11 **3.3.5 SR/AUDIO/RTPC/PayloadType0Receive**

12 Requirement: CONDITIONAL

13 Condition: Support for RTP Client AND

14 Support for RTP payload type 0

15 RTP packets are generated and sent to the RTP client on the MirrorLink server. The stream takes 10 seconds
16 and uses payload type 0.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 0	
2	Send RTP packets	Send RTP packets to the MirrorLink Server's RTP client. RTP stream at least 10s Payload type 0	<ul style="list-style-type: none"> • RTP packets received • May be send to audio playback
3	RTP client disconnect	See Definitions	

Table 25: Send payload type 0 RTP packets – Test Steps

3.3.6 SR/AUDIO/RTPC/PayloadType99Receive

Requirement: CONDITIONAL

Condition: Support for RTP Client

RTP packets are generated and sent to the RTP client on the MirrorLink server. The stream takes 10 seconds and uses payload type 99.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 99	
2	Send RTP packets	Send RTP packets to the MirrorLink Server's RTP client. RTP stream at least 10s Payload type 99	<ul style="list-style-type: none"> RTP packets received May be send to audio playback
3	RTP client disconnect	See Definitions	

Table 26: Send payload type 99 RTP packets – Test Steps

3.3.7 SR/AUDIO/RTPC/PayloadType98Receive

Requirement: CONDITIONAL

Condition: Support for RTP Client AND

Support for RTP payload type 98

RTP packets are generated and sent to the RTP client on the MirrorLink server. The stream takes 10 seconds and uses payload type 98.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 98	
2	Send RTP packets	Send RTP packets to the MirrorLink Server's RTP client. RTP stream at least 10s Payload type 98	<ul style="list-style-type: none"> RTP packets received May be send to audio playback
3	RTP client disconnect	See Definitions	

Table 27: Send payload type 98 RTP packets – Test Steps

3.3.8 SR/AUDIO/RTPC/VCR/ClientInitiated

Requirement: CONDITIONAL

Condition: Support for RTP Client AND

Support for Voice Command Recognition over RTP

RTP packets are generated and sent to the Voice Command Recognition Engine on the MirrorLink server. A pre-recorded audio clip MUST be provided from the DUT vendor that will cause the device to perform a given action, as described in the PIXIT.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 99	<ul style="list-style-type: none"> Audio Content entry of the RTP Client includes Voice Command In flag

Step	Name	Description	Expected Result
2	VNC connect	Test Engineer launches an application, which supports voice command recognition.	<ul style="list-style-type: none"> DUT provides URL in response to UPnP launch application VNC session established
3	Enable Voice Command Recognition	CTS sends VNC Device Status Request message, enabling Voice Command Input	<ul style="list-style-type: none"> DUT responds with VNC Device Status message, enabling Voice Command Input DUT responds with VNC Device Status message, enabling Microphone Input Note: Device Status messages MAY be combined into a single message

3.4 RTP Server

3.4.1 SR/AUDIO/RTPS/LaunchRtpServer

Requirement: MANDATORY

Condition: None

Tests if the RTP Server can be launched

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP server for payload type 99
3	Launch RTP Server	Invoke Launch Application for RTP server, supporting payload type 99. Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application RTP server status is "Foreground"
4	RTP server disconnect	See Definitions	

Table 32: Launch RTP Server - Test Steps

3.4.2 SR/AUDIO/RTPS/ConnectRtpServer

Requirement: MANDATORY

Condition: None

Tests if the RTP Server can be connected to the RTP Client

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	UPnP Application Listing	Invoke UPnP Get Application List action	<ul style="list-style-type: none"> Receive valid Application Listing Includes RTP server for payload type 99
3	Launch RTP Server	Invoke Launch Application for RTP server, supporting payload type 99. Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> Receive URL on Launch Application RTP server status is "Foreground"
4	Connect to RTP server	Open UDP socket Send single bytes to RTP server until at least one RTP packet arrives	<ul style="list-style-type: none"> First RTP packet arrives Packets received from URL identical to the advertised one
5	RTP server disconnect	See Definitions	

Table 33: Connect RTP Server - Test Steps

3.4.3 SR/AUDIO/RTPS/TerminateRtpServer

Requirement: MANDATORY

Condition: None

Tests if the RTP Server can be terminated

Step	Name	Description	Expected Result
1	RTP Server Connect	See Definitions Select payload type 99	
2	Terminate RTP Server	Invoke Terminate Application action. Close UDP socket Check application status via UPnP Get Application Status.	<ul style="list-style-type: none"> RTP server terminated RTP server status is "Notrunning" No RTP packets send after termination
3	UPnP Server Disconnect	See Definitions in [3]	

Table 34: Terminate RTP Server - Test Steps

3.4.4 SR/AUDIO/RTPS/PayloadType99Streaming

Requirement: MANDATORY

Condition: None

This step fails if the RTP packets received are not sent in payload type 99.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions Select payload type 99	
2	Streaming in Payload Type 99	Start audio playback Test Engineer confirms that audio quality is reasonable.	<ul style="list-style-type: none"> Correctly formatted RTP stream received Receive at least 10s of audio Payload type is 99
3	RTP server disconnect	See Definitions	

Table 35: Streaming in Payload Type 99 – Test Steps

3.4.5 SR/AUDIO/RTPS/PayloadType98Streaming

Requirement: CONDITIONAL

Condition: Support for RTP payload type 98

This step fails if the RTP packets received are not sent in payload type 98.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions Select payload type 98	
2	Streaming in Payload Type 98	Start audio playback Test Engineer confirms that audio quality is reasonable.	<ul style="list-style-type: none"> Correctly formatted RTP stream received Receive at least 10s of audio Payload type is 98
3	RTP server disconnect	See Definitions	

Table 36: Streaming in Payload Type 98 – Test Steps

3.4.6 SR/AUDIO/RTPS/PayloadType0Streaming

Requirement: CONDITIONAL

Condition: Support for RTP payload type 0

This step fails if the RTP packets received are not sent in payload type 0.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions Select payload type 0	
2	Streaming in Payload Type 0	Start audio playback Test Engineer confirms that audio quality is reasonable.	<ul style="list-style-type: none"> Correctly formatted RTP stream received Receive at least 10s of audio Payload type is 0
3	RTP server disconnect	See Definitions	

Table 37: Streaming in Payload Type 0 – Test Steps

3.4.7 SR/AUDIO/RTPS/GlobalAudioNormalization

Requirement: MANDATORY

Condition: None

This step fails if the audio volume does change, when the user changes external or global audio volume control on the MirrorLink Server device.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions	
2	Streaming RTP audio	Start audio playback Test Engineer confirms that audio quality is reasonable.	<ul style="list-style-type: none"> Correctly formatted RTP stream received
3	Global audio volume change	Test Engineer changes the audio volume on the DUT: <ul style="list-style-type: none"> external volume controls (if available) and global audio volume setting (if available) Note: This does not apply to any audio volume setting, applicable to a dedicated application.	<ul style="list-style-type: none"> Audio volume is reasonable in the beginning RTP audio volume does not change when audio volume is changed on the device.
4	RTP server disconnect	See Definitions	

Table 38: Normalization of Global Audio in RTP Stream

3.5 PICS Validation

The PICS validation test cases will independently detect the existence of MirrorLink features in the DUT. All features, which are detectable, could in practice be used from a connected MirrorLink device, and are therefore subject to validation in the certification program through other test cases. Hence the objective of the PICS validation test cases is not to assess whether the feature is implemented correctly, but to collect supported features from the DUT and to check this against the entries made in the PICS document.

- 1 A feature, which is detected, but marked as "not implemented" in the PICS document will fail the test
2 case. A feature, which is not detected, but marked as "implemented" in the PICS document, will fail the
3 test case.

4 3.5.1 SR/AUDIO/PICS/RTP

5 Requirement: MANDATORY

6 Condition: None

7 This test case validates the PICS entries with respect to the RTP settings.

Step	Name	Description	Expected Result
1	UPnP Server Connect	See Definitions in [3]	
2	Set Payload Type	Invoke Set Client Profile Define support for selected payload types 0, 98, 99	
3	UPnP Application Listing	Invoke UPnP Get Application List action	
4	Check PICS feature	FEAT_SERVER_AUDIO_RTP_Client_Type0	<ul style="list-style-type: none"> Application listing includes RTP Client with payload type "0"
5	Check PICS feature	FEAT_SERVER_AUDIO_RTP_Client_Type98	<ul style="list-style-type: none"> Application listing includes RTP Client with payload type "98"
6	Check PICS feature	FEAT_SERVER_AUDIO_RTP_Client_Type99	<ul style="list-style-type: none"> Application listing includes RTP Client with payload type "99"
7	Check PICS feature	FEAT_SERVER_AUDIO_RTP_Server_Type0	<ul style="list-style-type: none"> Application listing includes RTP Server with payload type "0"
8	Check PICS feature	FEAT_SERVER_AUDIO_RTP_Server_Type98	<ul style="list-style-type: none"> Application listing includes RTP Server with payload type "98"

Table 48: Streaming in Payload Type 98 – Test Steps

4.3.4 CL/AUDIO/RTPS/PayloadType0Streaming

Requirement: CONDITIONAL

Condition: Support for RTP Server AND

Support for RTP payload type 0

This step fails if the RTP packets received are not sent in payload type 0.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions CTS advertises a single RTP client with payload type 0 and audio type	<ul style="list-style-type: none"> Invoke Set Client Profile action to include RTP PT 0.

Step	Name	Description	Expected Result
		phone and content category Voice Command In.	
2	Open Microphone	CTS sends a VNC Device Status message enabling the Mic Input and Voice Command Input.	
3	Streaming in Payload Type 0	Start audio playback Test Engineer confirms that audio quality is reasonable.	<ul style="list-style-type: none"> • Correctly formatted RTP stream received • Receive at least 10s of audio • Payload type is 0
4	Close Microphone	CTS sends a VNC Device Status message disabling the Mic Input and Voice Command Input.	
5	RTP server disconnect	See Definitions	

Table 49: Streaming in Payload Type 0 – Test Steps

4.3.5 CL/AUDIO/RTPS/VCR/ClientInitiated

Requirement: CONDITIONAL

Condition: Support for RTP Server AND

Support for sending Voice Commands over RTP AND

Support for initiating the Voice Command AND

Support for terminating the Voice Command

The test case verifies, whether the MirrorLink Client device can send voice commands to the MirrorLink Server. The voice command is initiated and terminated from the client device, e.g. the user using a Push-to-Talk button.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions CTS advertises a single RTP client with payload type 99 and audio type phone and content category Voice Command In.	
2	VNC connect	Test Engineer launches an application, which supports voice command recognition.	<ul style="list-style-type: none"> • DUT sends UPnP launch application • VNC session established
3	Initiate Voice Command	Test Engineer initiates the voice command (PIXIT)	<ul style="list-style-type: none"> • DUT sends VNC Device Status Request message, enabling Voice Input • RTP backchannel established • No RTP stream received
4	Voice Command Input	CTS sends VNC Device Status message with Voice Input and Mic Input enabled	<ul style="list-style-type: none"> • Correctly formatted RTP stream received • RTP header extension value set to 0xF0000010

Step	Name	Description	Expected Result
		Test Engineer speaks into the microphone of the DUT	
5	End Voice Command	Test Engineer executes steps to end voice command (PIXIT)	<ul style="list-style-type: none"> DUT sends VNC Device Status Request message, disabling Voice Input
6	Mic is closed	CTS sends VNC Device Status message with Voice Input and Mic Input disabled Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> RTP stream finishes with M-flag set to 1 – latest 500ms after CTS sent the VNC Device Status message No RTP stream received.
7	Voice Command Playback	CTS plays the received voice command audio stream	<ul style="list-style-type: none"> Test Engineer confirms that audio is not garbled.
8	RTP server disconnect	See Definitions	

Table 50: Voice Command Input – Client Initiated

4.3.6 CL/AUDIO/RTPS/VCR/ServerInitiatedClientEnded

Requirement: CONDITIONAL

Condition: Support for RTP Server AND

Support for sending Voice Commands over RTP AND

Support for terminating the Voice Command

The test case verifies, whether the MirrorLink Client device can send voice commands to the MirrorLink Server. The voice command is initiated from the server device, e.g. the user using a Push-to-Talk button within the MirrorLink application. The Client device (DUT) ends the Voice Command input.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions CTS advertises a single RTP client with payload type 99 and audio type phone and content category Voice Command In.	
2	VNC connect	Test Engineer launches an application, which supports voice command recognition.	<ul style="list-style-type: none"> DUT sends UPnP launch application VNC session established
3	Initiate Voice Command	CTS sends a VNC Device Status message enabling the Mic Input and the Voice Command Input	<ul style="list-style-type: none"> RTP backchannel established No RTP stream received
4	Voice Command Input	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> Correctly formatted RTP stream received RTP header extension value set to 0xF0000010
5	Client Ends Voice Command	Test Engineer executes the steps to end the voice command (PIXIT)	<ul style="list-style-type: none"> DUT sends VNC Device Status Request message, disabling Voice Command Input

Step	Name	Description	Expected Result
6	Server ends Voice Command	CTS sends a VNC Device Status message disabling the Mic Input and the Voice Command Input in response	<ul style="list-style-type: none"> RTP stream finished with M flag set to 1 (can happen already in step 5) – latest 500ms after CTS sent the VNC Device Status message.
7	Mic is closed	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> No RTP stream received.
8	Voice Command Playback	CTS plays the received voice command audio stream	<ul style="list-style-type: none"> Test Engineer confirms that audio is not garbled.
9	RTP server disconnect	See Definitions	

Table 51: Voice Command Input – Server Initiated / Client Ended

4.3.7 CL/AUDIO/RTPS/VCR/ServerInitiatedServerEnded

Requirement: CONDITIONAL

Condition: Support for RTP Server AND

Support for sending Voice Commands over RTP

The test case verifies, whether the MirrorLink Client device can send voice commands to the MirrorLink Server. The voice command is initiated from the server device, e.g. the user using a Push-to-Talk button within the MirrorLink application. The Server device ends the Voice Command input.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions CTS advertises a single RTP client with payload type 99 and audio type phone and content category Voice Command In.	
2	VNC connect	Test Engineer launches an application, which supports voice command recognition.	<ul style="list-style-type: none"> DUT sends UPnP launch application VNC session established
3	Initiate Voice Command	CTS sends a VNC Device Status message enabling the Mic Input and the Voice Command Input	<ul style="list-style-type: none"> RTP backchannel established No RTP stream received
4	Voice Command Input	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> Correctly formatted RTP stream received RTP header extension value set to 0xF0000010
5	Server Ends Voice Command	CTS sends a VNC Device Status message disabling the Mic Input and the Voice Command Input	<ul style="list-style-type: none"> RTP stream finished with M flag set to 1 – latest 500ms after CTS sent the VNC Device Status message
6	Mic is closed	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> No RTP stream received.
7	Voice Command Playback	CTS plays the received voice command audio stream	<ul style="list-style-type: none"> Test Engineer confirms that audio is not garbled.

Step	Name	Description	Expected Result
8	RTP server disconnect	See Definitions	

Table 52: Voice Command Input – Server Initiated / Server Ended

4.3.8 CL/AUDIO/RTPS/MicrophoneInput

Requirement: CONDITIONAL

Condition: Support for RTP Server AND

Support for Conversational Audio over RTP

The test case verifies, whether the MirrorLink Client device can send conversational audio to the MirrorLink Server. The audio is initiated from the server device, e.g. trigger by the application.

Step	Name	Description	Expected Result
1	RTP Server connect	See Definitions CTS advertises a single RTP client with payload type 99 and audio type phone and content category Phone.	
2	Open Microphone	CTS sends a VNC Device Status message enabling the Mic Input.	
3	Audio Input	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> Correctly formatted RTP stream received RTP header extension value set to 0xF0000020
4	Close Microphone	CTS sends a VNC Device Status message disabling the Mic Input	<ul style="list-style-type: none"> RTP stream finished with M flag set to 1
5	Mic is closed	Test Engineer speaks into the microphone of the DUT	<ul style="list-style-type: none"> No RTP stream received.
6	Voice Command Playback	CTS plays the received audio stream	<ul style="list-style-type: none"> Test Engineer confirms that audio is not garbled.
7	RTP server disconnect	See Definitions	

Table 53: Microphone Input

4.4 RTP Client

4.4.1 CL/AUDIO/RTPC/LaunchRtpServer

Requirement: MANDATORY

Condition: None

Tests if the RTP Client can be launched

Step	Name	Description	Expected Result
1	UPnP Client Connect	See Definitions in [3]	
2	UPnP Application Listing	Wait for Get Application List action. Provide Application List including RTP server with payload type 0 and 99. Do not include BT modules into the App listing;	<ul style="list-style-type: none"> Invoke Get Application List action
3	Launch RTP Server	Wait for Launch Application action for the RTP server	<ul style="list-style-type: none"> Invoke Launch Application AppID is matching RTP Server
4	RTP Client disconnect	See Definitions	

Table 54: Launch RTP Client - Test Steps

4.4.2 CL/AUDIO/RTPC/ConnectRtpClient

Requirement: MANDATORY

Condition: None

Tests if the RTP Server can connect to the RTP Client.

Step	Name	Description	Expected Result
1	UPnP Client Connect	See Definitions in [3]	
2	UPnP Application Listing	Wait for Get Application List action. Provide Application List including RTP server with payload type 99. Do not include BT modules into the App listing;	<ul style="list-style-type: none"> Invoke Get Application List action
3	Launch RTP Server	Wait for Launch Application action for the RTP server	<ul style="list-style-type: none"> Invoke Launch Application AppID is matching RTP server
4	Connect to RTP server	Open UDP socket Send empty RTP packet on single UDP byte Wait for at least 2 single UDP bytes prior sending an empty RTP packet	<ul style="list-style-type: none"> Receive single UDP bytes, until at least one RTP packet is send.
5	RTP Client disconnect	See Definitions	

Table 55: Connect RTP Client - Test Steps

4.4.3 CL/AUDIO/RTPC/InitialPlaybackLatency

Requirement: MANDATORY

Condition: None

The test engineer gets asked to prepare to listen to audio. The server sends a couple of RTP packets to the client, together containing less than IPL samples as payload. The marker bit in the last packet is not set. The client is expected to wait for at least IPL samples to start playback, thus the test engineer SHOULD NOT hear anything. The test engineer is being asked if this is the case.

Step	Name	Description	Expected Result
1	RTP client connect	See Definitions Select payload type 99	
2	Initial Playback Latency	Send RTP packets to the MirrorLink Server's RTP client. Marker bit is not set. RTP stream, number of samples in RTP stream is less than 90% of announced IPL. Payload type 99	<ul style="list-style-type: none"> RTP packets received No audio playback
3	RTP Client disconnect	See Definitions	

Table 56: Initial Playback Latency – Test Steps

4.4.4 CL/AUDIO/RTPC/PayloadType0Receive

Requirement: CONDITIONAL

Condition: Support for Payload Type 0

The test engineer gets asked to prepare to listen to audio. For a 10 second interval audio is being streamed to the RTP client. The used payload type is 0 and MirrorLink header extensions are embedded. The test engineer is asked if the audio could be heard.

Step	Name	Description	Expected Result
1	RTP Client Connect	See definitions Select payload type 0	
2	Send Payload Type 0 Stream	Provide RTP stream with payload type 0 (at least 10s) Include valid MirrorLink RTP header extensions Test Engineer is asked to prepare to listen to audio and adjust audio levels at the MirrorLink client Test Engineer is asked if the audio can be heard and audio quality is reasonable.	<ul style="list-style-type: none"> Audio is being played from the MirrorLink client Reasonable audio quality
3	RTP Client Disconnect		

Table 57: Receive Payload Type 0 RTP Stream – Test Steps

4.4.5 CL/AUDIO/RTPC/PayloadType99Receive

Requirement: MANDATORY

Condition: None

- 1 The test engineer gets asked to prepare to listen to audio. For a 10 second interval audio is being streamed
- 2 to the RTP client. The used payload type is 99 and MirrorLink header extensions are embedded. The test
- 3 engineer is asked if the audio could be heard.

Step	Name	Description	Expected Result
1	RTP Client Connect	See definitions Select payload type 99	
2	Send Payload Type 99 Stream	Provide RTP stream with payload type 0 (at least 10s) Include valid MirrorLink RTP header extensions Test Engineer is asked to prepare to listen to audio and adjust audio levels at the MirrorLink client Test Engineer is asked if the audio can be heard and audio quality is reasonable.	<ul style="list-style-type: none"> • Audio is being played from the MirrorLink client • Reasonable audio quality
3	RTP Client Disconnect		

4 Table 58: Receive Payload Type 99 RTP Stream – Test Steps

5 4.4.6 CL/AUDIO/RTPC/PayloadType98Received

6 Requirement: CONDITIONAL

7 Condition: Support for Payload Type 98

- 8 The test engineer gets asked to prepare to listen to audio. For a 10 second interval audio is being streamed
- 9 to the RTP client. The used payload type is 98 and MirrorLink header extensions are embedded. The test
- 10 engineer is asked if the audio could be heard.

Step	Name	Description	Expected Result
1	RTP Client Connect	See definitions Select payload type 98	
2	Send Payload Type 98 Stream	Provide RTP stream with payload type 0 (at least 10s) Include valid MirrorLink RTP header extensions Test Engineer is asked to prepare to listen to audio and adjust audio levels at the MirrorLink client Test Engineer is asked if the audio can be heard and audio quality is reasonable.	<ul style="list-style-type: none"> • Audio is being played from the MirrorLink client • Reasonable audio quality
3	RTP Client Disconnect		

11 Table 59: Receive Payload Type 98 RTP Stream – Test Steps

12 4.5 PICS Validation

- 13 The PICS validation test cases will independently detect the existence of MirrorLink features in the DUT. All
- 14 features, which are detectable, could in practice be used from a connected MirrorLink device, and are there-
- 15 fore subject to validation in the certification program through other test cases. Hence the objective of the
- 16 PICS validation test cases is not to assess whether the feature is implemented correctly, but to collect sup-
- 17 ported features from the DUT and to check this against the entries made in the PICS document.

A feature, which is detected, but marked as "not implemented" in the PICS document will fail the test case. A feature, which is not detected, but marked as "implemented" in the PICS document, will fail the test case.

4.5.1 CL/AUDIO/PICS/RTP

Requirement: MANDATORY

Condition: None

This test case validates the PICS entries with respect to the RTP settings.

Step	Name	Description	Expected Result
1	UPnP Client Connect	See Definitions in [3]	
2	UPnP Application Listing	Wait for Get Application List action. Provide Application List including RTP Servers with payload types 0, 98, 99.	
3	Check PICS feature	FEAT_CLIENT_AUDIO_RTP_Client_Type0	<ul style="list-style-type: none"> payloadType includes "0" in Client Profile
4	Check PICS feature	FEAT_CLIENT_AUDIO_RTP_Client_Type98	<ul style="list-style-type: none"> payloadType includes "98" in Client Profile
5	Check PICS feature	FEAT_CLIENT_AUDIO_RTP_Client_Type99	<ul style="list-style-type: none"> payloadType includes "99" in Client Profile OR Client Profile not set.

Table 60: MirrorLink Client RTP settings PICS Checkup
